KRONOTEX greenline

Innovative noise reduction under laminate, parquet and LVT

Footfall disturbs the neighbors below, reflected noise stays in the same room. In both cases there are differing insulation strategies. Now there is KRONOTEX greenline:

++ HIGHLY EFFICIENT

With its exactly balanced combination of volume (sheet thickness/size of 1.8 mm) and density (384 kg/m³) KRONOTEX greenline achieves optimal insulation properties at all levels, **reducing footfall volume by an incredible 22.5 decibels decreasing reflected noise by more than 42%**. Its pressure resistance (99 t/m²) withstands the heaviest of loads. Its highly conductive properties (0.0343 m²K/W) aids underfloor heating.

++ FULLY ECOLOGICAL

Wood and plant fibres form the base of KRONOTEX greenline. The environmentally friendly produced insulation boards are hard wearing and completely compostable after use. This product is **100% natural, completely contaminant and emission free** and is especially suitable for bedrooms and children's rooms. Their guaranteed antistatic quality means they are also suitable for rooms with computer equipment.

++ PRACTICAL

Thanks to KRONOTEX greenline's extraordinary material structure of numerous standing fibres it attaches perfectly to all floor surfaces. If the underfloor preparation involves careful cleaning, the insulation sheets can be used to even out small irregularities to achieve a homogenous foundation for laminate installation.

Naturally, KRONOTEX greenline is approved for all building uses: the Ü-Certificate (Ü mark of conformity, German Institute for Structural Engineering) guarantees that the quality of our product exceeds the those required by all general building regulations.

Measurements:

SHEET	790 x 590 x 1.8 mm
BOX	15 sheets / 6.99 m ²
